**“AN INNOVATIVE PUMP.  
AN EVOLUTIONARY FUTURE.”**

During the past two years WindTrans Systems Ltd. has been focused on producing a revolutionary pump or kinetic turbine that will change how we use and produce energy as we know it today. This Pump or Kinetic Turbine named Zelda can be hand operated with a hand crank or motor driven providing a wider range of use.

This hand crank or motor driven pump will provide high volume output with little required torque for operation. Zelda is revolutionary technology proving to be 90%+ efficient making it an unmatched pump operating in forward or reverse. Being able to pump high volume and high pressure makes it possible to desalinate water by pushing through a filtration system. Clearing or backwashing the filtration system is not a problem because of Zelda's ability to run forward and reverse.

### EFFICIENCY DATA.

### 15' HEAD PRESSURE TEST RESULTS.
